

High Temp. Water Heater

STM-607PW

STM-PW Series

Coding Principle

Control Panel

Features

- For standard STM-PW, the maximum heating temperature is 180°C/356°F.
- 4.3" Touch screen controller with easy to use HMI and clean display.
- Adopt SSR solid-state relay controller.
- Adopt non-contact heaters to reduce the water scale in the heater to improve the machine's service life. (Exclude STM-2440PW)
- Adopt plate heat exchanger for direct cooling and accurate temperature control, and the low water viscosity makes quick heat exchange.
- P.I.D. controller with a user-friendly interface. The multi-stage controller can maintain stable mould temperature with a precision of +/- 0.5°C.
- In build weekly timer with °C/°F. unit conversion.
- Multiple safety devices including power reverse phase protection, pump overload protection, overheat protection and low level protection that can automatically detect abnormal performance and indicate this via visible alarm.
- Built-in magnetic pump without seal.
- RS485 communication interface achieves centralized monitoring with the host.
- With flow reference value display
- Equipped with water level probe and high-pressure plunger pump that could accurately detect
 the water level, and refill during high-pressure as to avoid empty water system.

Options

- For models optional with magnetic filter to prolong the service life the magnetic pump, and add "MF" at the end of the model code.
- For models optional with mold temperature and mold return water temperature display, and add "TS" at the end of the model code.
- For models optional with air-blowing function, add "A" at the end of the model code.
- For models optional with the circuit breaker, add "CB" at the end of the model code.

Non-contact heater

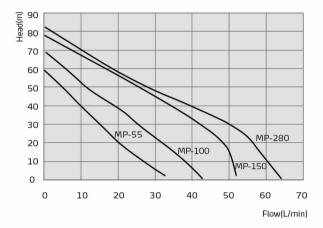

Application

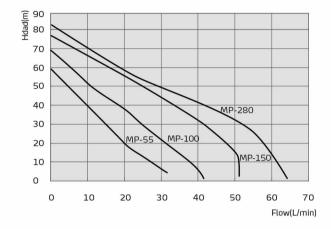

STM-PW series high temp. water heaters are mainly used for mold heating and mold temperature maintaining. Besides, it is also applicable to fields with other similar demands.

Compared with the STM-W water heater, this series is able to meet wider production demands under higher heating temperature (180°C) condition. Besides, there are many options and accessories for this series of machine that can meet different production demands.

Notes: 1) To ensure stable water temperature, cooling water pressure

We reserve the right to change specifications without prior notice.

3) Power supply: 3Φ, 230/400/460/575VAC, 50/60Hz.

should not be less than 2kgf/cm², but also no more than 5kgf/cm². 2) Pump testing standard: Power of 50/60Hz, purified water at 20°C/68°F. (There is ±10% tolerance for either max. flowrate or max. pressure).
